Reveal 3-D

For Egg

Intended Use

Reveal 3-D for Egg is intended for the qualitative analysis of egg residue in clean-in-place rinses and on environmental surfaces.

The Test

Reveal 3-D for Egg is a unique hand-held device with a 3-line readout: a control line confirms the method has been performed successfully and two other lines differentiate nondetectable, low and high levels of egg.

The Procedure

- 1. Add Type 3 extraction buffer to sample tube.
- Add 0.25 mL of rinse or environmental swab to a sample tube. 2.
- 3. Cap and shake for 1 minute.
- 4. Remove cap and fill with liquid from tube.
- 5. Dip the Reveal 3-D device into the liquid in the lid.
- 6. Leave the cavity saturated until liquid is seen running into the test window.
- Place device in a flat surface and allow test to develop for 5 minutes. 7.

See package insert for complete instructions.

Product Specifications

S

Sensitivity:	Screens samples at 5–10 ppm egg
	Screens swabs at 20 $\mu g/100~cm^2~egg$
Testing time:	5 minutes
Storage:	Refrigerated (2-8°C)
Tests per kit:	10
